

Turn your data into knowledge

In the digital world, the amount of data is getting increased unceasingly. Some believe crude data is of great value to their business. Do you?

As much as 85% of corporate data is unstructured data, which prompts companies to look for new solutions to help extract this data, organize it and classify it properly.

To support information workers on assignments in the knowledge management field, we have come up with **DoRIS** - an integrated software solution powered by machine learning algorithms and natural language processing. DoRIS can refer to a wide range of document sources, including local catalogues and public cloud, collect and process comprehensively all information available, and store it at your fingertips. This is how we turn your data into accessible knowledge.

Business Benefits

Accurate document search results, material to contents and relevant to query.

A **cost-saving solution**, as compared to storing redundant data.

Improved efficacy - reduce amount of time spent on document creation.

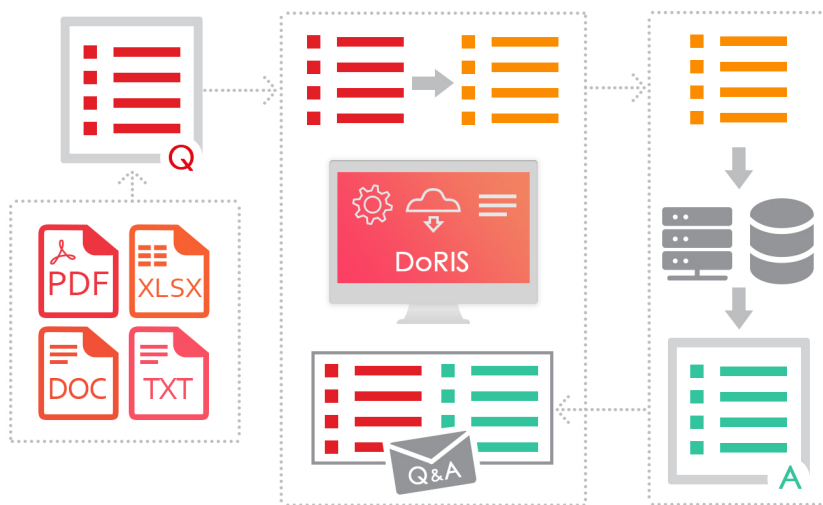

Centralized access - data democratization

Reduction of costs related to searching for data and information.

Automation of information acquisition and delivery processes.

Uncertainty reduction in business decisions - by extracting data from the dark-data area.

Factual consistent and complete information.

The distinguishing feature of the solution is mechanism of automatic relay and document indexing, complemented by intelligent data search. Simply ask, and DoRIS right away will provide you with specific information you just need.
