

# Managing training materials beyond individual projects

*Vasso Kalaitzi, LIBER  
Ellen Leenarts, DANS - KNAW  
Prague, April 10th 2019*

# Training information produced by EU funded projects and organisations

- Learning materials (e.g. on Open Science, RDM, FAIR data, etc)
- Info related to training events
- Training networks
- Procedures
  
- Generic and interdisciplinary materials
- Re-used and re-branded materials

# How is training material currently managed by projects?

\* Most frequently: on their websites, in project-specific MOOC, or solutions such as:

**GitHub**

# What are the wishes of the researchers/targets of training?

*The starting point is/should be the communities' and end users' needs*

- Better equipped discipline-specific and across disciplines RDM support
- OS support
- Openly available and reusable material
- Where to find the material
- Repositories and where to find them
- Curricula for researchers/data supporters/data stewards/librarians, etc
- Cataloguing of training with rich metadata for sustainable access and OS in practice

# What are the wishes of the projects?

- Uptake of project solutions
- Sharing of project results with branding
- Measurable results/Impact
- Provide sustainable information

*But also*

*\*Build on existing materials with other and/or improved generic content and/or domain and/or discipline specific content*

*\*Create project-specific material, if needed (for example, on how to use project tools, or targeted to developers*

# What are the issues identified?

1

How can training material be organized across projects? What needs to be taken into account? (e.g. Avoid duplication)

2

How can it be more visible/findable by other projects and researchers? (FAIR training)

3

What about long-term sustainability after the end of a project? (storage, keeping material up to date, managing networks, etc) How and who? EOSC Portal as a catalogue of catalogues?

4

What about options like the Elixir Training eSupport System (<https://tess.elixir-europe.org/>) ?

\*To be taken into account at the stage of the proposal!

# Join us for the SSHOC SSH Training Network

**Broaden** your network.

**Share** knowledge.

**Be empowered** with skills and expertise

**Everyone in the SSH community is  
welcome!**
